

---

# AI is training on stolen data

*Billions of texts, images, code and music are being scraped from the internet without consent – violating the intellectual property of millions of artists, writers and creators.*

---

# The numbers are shocking

5.8B+  
Images

50 Million +  
Songs

31 M+  
Books

300 Million +  
Repos

---

# The industry lacks regulation

1.5 B in damages  
sought via lawsuits

The industry is missing institutional governance on:

- Obtaining creator consent before training
- Tracking which data was used in a model
- Compensating creators for the AI outputs
- Auditing models for IP infringement

This gap raises important ethical concerns.

---

# INTRODUCING OUR SOLUTION

## *ALL & AI*

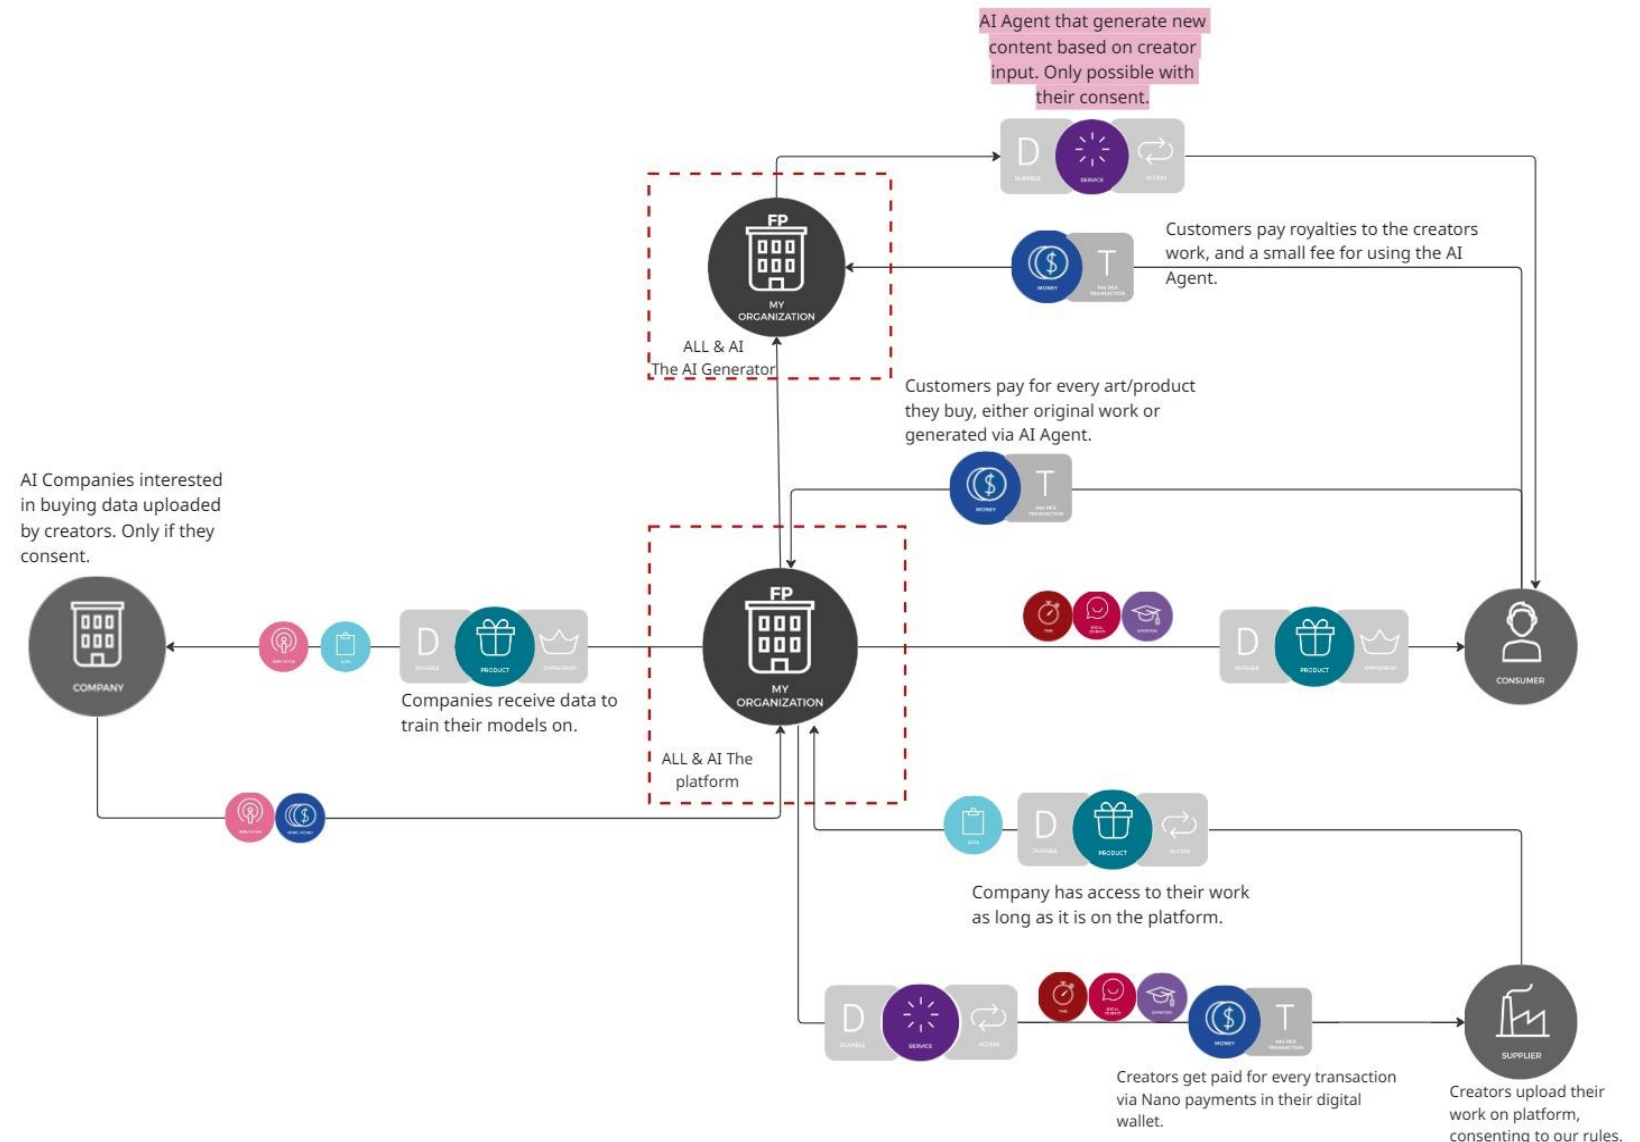

A Multi-Asset Ecosystem Powered by  
Nanopayments and Ethical AI.

- **A marketplace for everything:** One platform to buy and sell music, code, 3D models, animations, any creative output.
- **Nanopayments for micro-sales:** No high transaction fees. Sell small assets for cents, making "micro-purchases" feasible. Enabling new-comers to have more chances.
- **Transparent AI Generating:** Users can generate new variations of art based on reference pieces. The system automatically tracks the source and pays the original artists their share.
- **Consented Data Licensing:** Artists decide if they want to sell their work to AI companies for model training. We provide the "clean" data developers need.

# Business Model Mapping of ALL & AI

## Revenue streams:

- Transaction fees: a small cut from every direct sale (music, code, etc.)
- AI Generation fees: it will be split between our platform and the original artists.
- Selling the ethically sourced data to AI companies to train their models.

Explanation of every component will be provided at the end of the presentation.

# The market share

## The creators

- The User Base: Over 200 Million creators worldwide—from hobbyists selling crochet patterns on Etsy to developers selling code on Gumroad.
- The Opportunity: Most "micro-creators" make less than \$1k/year because of high platform fees. Our nanopayments unlock the "middle class" of creators who want to sell small assets for \$0.10 - \$2.00 without losing money to bank fees.

## The users

- The User Base: Millions of consumers who use AI tools (like Midjourney or ChatGPT) to build projects. Also, regular users that want to support new-comers and browse for new art inspiration.
- The Opportunity: Massive demand for custom AI art. Our AI allows generating highly customizable products that might be very difficult to obtain from somewhere else (e.g. crocheting directions for a gothic teddy bear).

## B2B AI LLMs

- **Market Size: \$3.8 Billion** specifically for AI training datasets.
- The Opportunity: Most "micro-creators" make less than \$1k/year because of high platform fees. Our nanopayments unlock the "middle class" of creators who want to sell small assets for \$0.10 - \$2.00 without losing money to bank fees.
